## ABOUT SIMPDA

With the increasing automation of business processes, growing amounts of process data become available. This opens new research opportunities for business process data analysis, mining and modeling. The aim of the IFIP 2.6 International Symposium on Data-Driven Process Discovery and Analysis is to offer a forum where researchers from different communities and the industry can share their insight in this hot new field.

The Symposium will feature a number of advanced keynotes illustrating new approaches, shorter presentations on recent research, a competitive PhD seminar and selected research and industrial demonstrations.
